The Conductive Education Program

The vision of our Conductive Education Program is to provide a holistic and dynamic learning program based on the principles of Conductive Education for students who have Intellectual and Physical Disabilities.

Conductive Education is an educational system that focuses on a student's ability to gain independence and control over their motor functions. The program motivates our learners through the use of routine, facilitation, rhythm and movement.

Each students' day is carefully planned using the Australian Curriculum to provide appropriate academic outcomes and a context for learning. For each student to learn holistically, learning sessions incorporate activities to develop communication, gross and fine motor skills, mobility and their ability to utilise technology to engage effectively in their learning environment.
